

Java Database Connectivity with MySQL

In Java, we can connect our Java application with the MySQL database through the Java code. JDBC (Java Database Connectivity) is one of the standard APIs for database connectivity, using it we can easily run our query, statement, and also fetch data from the database.

Prerequisite to understand Java Database Connectivity with MySQL

1. You should have [MySQL](#) on your System.
2. You should have [JDK](#) on your System.
3. To set up the connectivity, the user should have MySQL Connector to the Java (JAR file),
the 'JAR' file must be in classpath while compiling and running the code of JDBC.

Steps to download MySQL Connector

Step 1 – Search for MySQL community downloads.

Step 2 – Go to the **Connector/J**.

Step 3 – Select the Operating System **platform-independent**.

Step 4 – Download the zip file **Platform Independent (Architecture Independent)**, ZIP Archive.

MySQL Community Downloads

Connector/J

Got It !

Step 5 – Extract the zip file.

Step 6 – Get the **mysql-connector-java-8.0.20.jar** file from the folder.

Setting up Database Connectivity with MySQL

We use cookies to ensure you have the best browsing experience on our website. By using our site, you acknowledge that you have read and understood our [Cookie Policy](#) & [Privacy Policy](#).

Step 1 – Users have to create a database in MySQL (for example let the name of the database be 'mydb').

Step 2 – Create a table in that database.

Example:

```
create table designation
(
    code int primary key auto_increment,
    title char(35) not null unique
);
```

This is MySQL code for creating a table.

Step 3 – Now, we want to access the data of this table using Java database connectivity.

- Create a directory in your main drive (named gfg).
- Now, inside gfg created two more directories one named as 'src' and the other 'lib'.

```
C:\WINDOWS\system32\cmd.exe

C:\>md gfg

C:\>cd gfg

C:\gfg>md lib

C:\gfg>md src

C:\gfg>dir
Volume in drive C has no label.
Volume Serial Number is DC5F-2A04

Directory of C:\gfg

14-12-2021  08:03    <DIR>        .
14-12-2021  08:03    <DIR>        ..
14-12-2021  08:03    <DIR>        lib
14-12-2021  08:03    <DIR>        src
               0 File(s)              0 bytes
               4 Dir(s)  51,382,362,112 bytes free

C:\gfg>
```

- Put the MySQL connector java jar file in the lib folder.

We use cookies to ensure you have the best browsing experience on our website. By using our site, you acknowledge that you have read and understood our [Cookie Policy](#) & [Privacy Policy](#).

```

C:\gfg>cd lib

C:\gfg\lib>dir
Volume in drive C has no label.
Volume Serial Number is DC5F-2A04

Directory of C:\gfg\lib

14-12-2021  08:08    <DIR>          .
14-12-2021  08:08    <DIR>          ..
09-03-2020  11:19             2,385,601 mysql-connector-java-8.0.20.jar
               1 File(s)                2,385,601 bytes
               2 Dir(s)  51,388,645,376 bytes free

```

Step 4 – We will write connectivity code in the src folder, To write connectivity code user must know the following information:

- **Driver class:-** The driver class for connectivity of MySQL database "*com.mysql.cj.jdbc.Driver*", after the driver has been registered, we can obtain a Connection instance that is connected to a particular database by calling *DriverManager.getConnection()*; in this method, we need to pass URL for connection and name and password of the database.
- **URL for Connection:-** The connection URL for the mysql database is *jdbc:mysql://localhost:3306/mydb* ('mydb' is the name of database).

Specify to the DriverManager which JDBC drivers to try to make Connections use below line:

```
Class.forName("com.mysql.cj.jdbc.Driver");
```

To get connection object use below line :

```
Connection connection=DriverManager.getConnection("URL in
string","username","password");
```

To get more clarification follow the connectivity code below:

Step 5 – In this src code, we will set up the connection and get all the data from the table. we have created the '*check.java*' file in the *src* folder.

Java

```
public static void main(String arg[])
{
    Connection connection = null;
    try {
        // below two lines are used for connectivity.
        Class.forName("com.mysql.cj.jdbc.Driver");
        connection = DriverManager.getConnection(
            "jdbc:mysql://localhost:3306/mydb",
            "mydbuser", "mydbuser");

        // mydb is database
        // mydbuser is name of database
        // mydbuser is password of database

        Statement statement;
        statement = connection.createStatement();
        ResultSet resultSet;
        resultSet = statement.executeQuery(
            "select * from designation");
        int code;
        String title;
        while (resultSet.next()) {
            code = resultSet.getInt("code");
            title = resultSet.getString("title").trim();
            System.out.println("Code : " + code
                               + " Title : " + title);
        }
        resultSet.close();
        statement.close();
        connection.close();
    }
    catch (Exception exception) {
        System.out.println(exception);
    }
} // function ends
} // class ends
```

Output of 'check.java' file in the src folder:

We use cookies to ensure you have the best browsing experience on our website. By using our site, you acknowledge that you have read and understood our [Cookie Policy](#) & [Privacy Policy](#).

```
C:\gfg\src>javac -classpath ..\lib\mysql-connector-java-8.0.20.jar;. Check.java

C:\gfg\src>java -classpath ..\lib\mysql-connector-java-8.0.20.jar;. Check
Code : 2 Title : CEO
Code : 3 Title : cook
Code : 1 Title : dancer
Code : 5 Title : manager
Code : 31 Title : null
Code : 8 Title : security
Code : 6 Title : waiter

C:\gfg\src>_
```

Note:

- To run the above code first create a table in your MySQL database and add some data manually.
- To compile the above code use “javac -classpath ..\lib\mysql-connector-java-8.0.20.jar;. Check.java”.
- To run the above code use “java -classpath ..\lib\mysql-connector-java-8.0.20.jar;. Check”.

Feeling lost in the vast world of Backend Development? It's time for a change! Join our [Java Backend Development - Live Course](#) and embark on an exciting journey to master backend development efficiently and on schedule.

What We Offer:

- Comprehensive Course
- Expert Guidance for Efficient Learning
- Hands-on Experience with Real-world Projects
- Proven Track Record with 100,000+ Successful Geeks
